

Silica Gel Breather – 1.5kg  
Carton size: 370x170x170  
Weight: 1.8kg  
Dangerous Goods: NO

Reusable breather valve

Gel Colour: Orange to Green  
Thread size: ¾" BSP  
Stackable: NO  
Model: TAGel-18-1.5

This silica gel breather is designed as a disposable breather which will last in the field considerably longer than a standard oil cup breather.

The oil free valve on the bottom does not restrict airflow, however acts as the first water trap prior to the desiccant doing its job.

These breathers are robust and easy to install.

- No more oil baths to break, lose or keep topping up
- Sealed breather – keeps the silica gel inside the canister at all times
- Refills can be carried by field staff and changed out in just minutes. No more having 10kg of gel and spare buckets to worry about

Transaudit stake their reputation on these silica gel breathers and guarantee their effectiveness in most situations.

Transaudit have other models which can be stacked or used in dual for larger volume transformers.

Ideal for OLTC breathers as well

Standardise your network breathers using this Transaudit Silica Gel breather.

Save time and money by field techs carrying spares for easy replacement when required and keep the transformer in the best possible condition by ensuring the silica gel breathers are replaced when required.

Oxygen, moisture and heat will eventually form acids in your oil. Help slow the process by having quality desiccant breathers working effectively.
